Manasa Sambaraju

Peoria, IL | 6562039140 | manasasambaraju2405@gmail.com | LinkedIn | gh/manasa

Summary

Software Engineer with full-stack experience building and maintaining secure, scalable applications using Java, Spring Boot, React, REST APIs, PostgreSQL, Azure, and AWS. Skilled in microservices, enterprise authentication, API integration, performance optimization, automated testing, cloud platforms, and production support across insurance, finance, and e-learning.

Technical Skills

- **Languages & Frontend**: Java, Python, JavaScript, TypeScript, React, Angular, HTML5, CSS3, C#
- **Backend, APIs & Testing**: REST APIs, Microservices, Kafka, Node.js, JUnit, Microsoft Graph API, JMockit
- **Cloud, DevOps & Tools**: Azure, AWS (S3, RDS, EC2, Lambda), Splunk, Dynatrace, AWS Bedrock Agents, Kubernetes, CI/CD, Docker, Git, Claude Code, GitHub Copilot
- **Databases & Security**: SQL, PostgreSQL, MongoDB, Microsoft Entra External ID, OAuth 2.0
- **Development Methodologies**: SAFe Agile

Experience

State Farm Insurance | *Full Stack Developer* **May 2025 - Present**

- Modernize enterprise authentication by migrating from on-premises LDAP to Microsoft Entra External ID and applying OAuth 2.0 across React frontends, Spring Boot microservices, and REST APIs, eliminating legacy identity dependencies.
- Engineer end-to-end identity workflows with Microsoft Graph API, custom attribute mapping, role-based authorization, and feature flags to preserve functional parity and strengthen access management.
- Build a GenAI virtual assistant with AWS Bedrock Agents, Lambda, React, and Node.js; integrate enterprise APIs to automate workflows, streamline employee support, and reduce manual effort.

Community Dreams Foundation | *Software Engineer* **Jun 2024 - Apr 2025**

- Optimized Spring Boot services and PostgreSQL queries, increasing course-data processing efficiency by 40% and accelerating e-learning platform response times by 25%.
- Secured REST APIs with JWT authentication, strengthening input validation and session integrity while improving platform security and reliability by 30%.
- Streamlined Jira-based incident resolution, service requests, and performance tracking to support production operations, maintain system reliability, and accelerate issue management.

Jabil | *Financial Systems Developer* **May 2023 - May 2024**

- Developed and supported a financial operations application used by global finance teams across multiple sites, ensuring reliable transaction processing and reporting.
- Built .NET APIs with Entity Framework for data synchronization, paired with React interfaces and optimized SQL procedures to improve platform performance by 45%.
- Automated intercompany financial calculations and reporting workflows, eliminating more than 70 staff-hours of manual effort each month.

Cognizant Technology Solutions | *Programming Analyst* **Jul 2021 - Jul 2022**

- Transitioned MetLife SOAP APIs to REST and optimized SQL procedures, increasing data-processing efficiency by 40% and delivering a more responsive end-user experience.
- Implemented React components for HTTP-based data retrieval and input validation, improving client-side usability and supporting reliable server integration.
- Applied test-driven development with JUnit and JMockit, achieving 90% code coverage and improving system stability by 15%.

Education

University of South Florida **Aug 2022 - May 2024**
Master of Science, Computer Science & Engineering *Tampa, FL*

Kakatiya Institute of Technology & Science **Aug 2017 - May 2021**
Bachelor of Technology, Computer Science & Engineering *Warangal, IND*
